"ValidMind's leading-edge model governance and validation tools and platform bring together concepts and ideas from two distinct streams: the model validation of statistical and AI models (including LLMs and GenAI tools) and traditional quantitative frameworks (such as derivatives, market risk and credit risk). This unique crossover earned ValidMind a category leader placing in all three of our quadrants.

Sid Dash
Chief Researcher, Chartis

"This recognition by Chartis Research solidifies ValidMind's position as a pioneer and enterprise leader in AI and model risk management. Being named a category leader across multiple quadrants highlights our platform's unmatched innovation and transformative capabilities in tackling the financial industry's most pressing AI and GenAI challenges. This acknowledgment from an unbiased and rigorous evaluation affirms our value to our clients. We are inspired to continue redefining excellence in model validation and governance, setting new benchmarks for the entire industry.

Jonas Jacobi
Co-founder, CEO, ValidMind
